

A decision is more than its final action

Three typed outputs are evaluated separately on the same policy states.

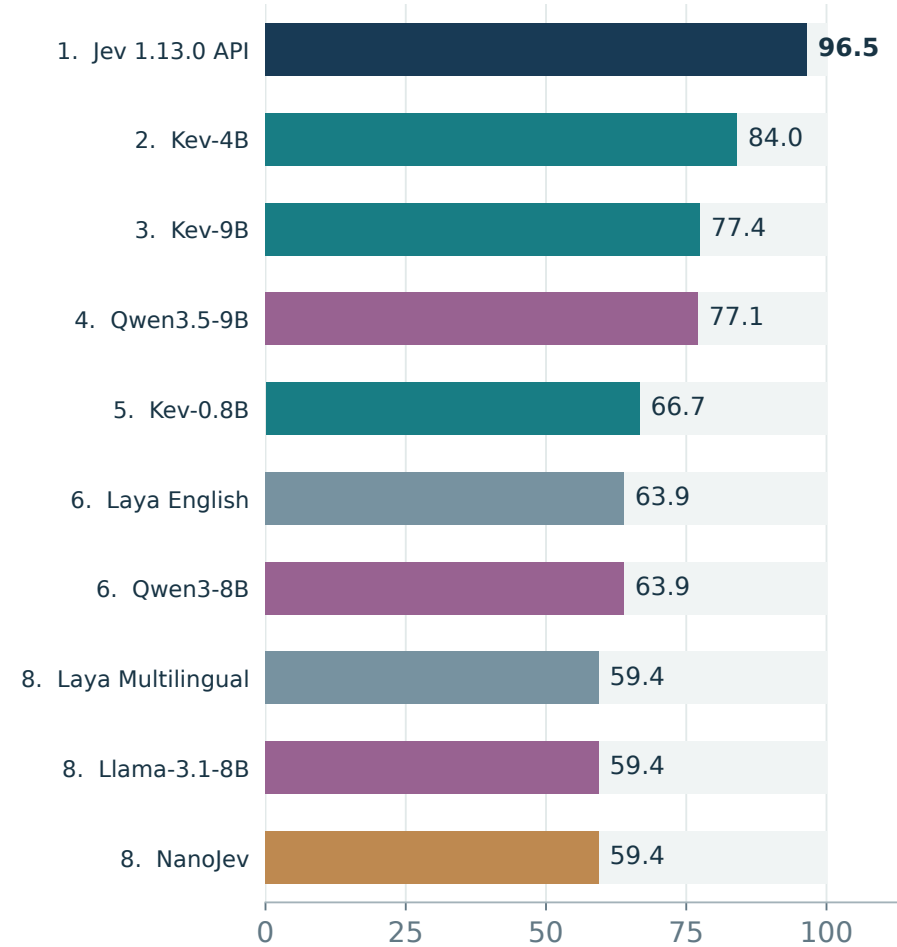

01 Action

288 original policy states · equal rule coverage

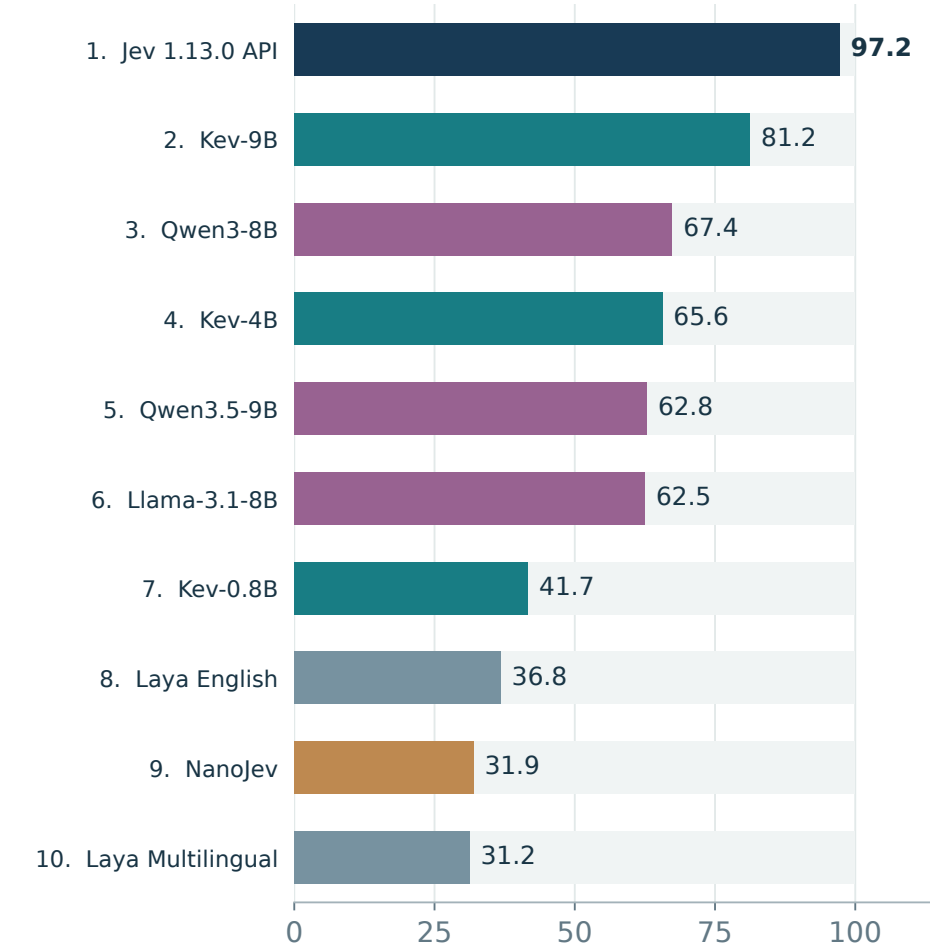

02 Human review

288 original policy states · equal rule coverage

03 Severity

288 original policy states · equal rule coverage

Each bar reports strict reference correctness for its own output head, not confidence or a model-internal risk score.

The separate all-three-correct system measure for every model is available in the CSV and Chinese report.
